

# Climate Resilient Restoration and Management of Box Gum Grassy Woodlands

FIELD DAY at the CSIRO Experimental Site,  
Charles Sturt University, Wagga Wagga,  
Friday 31st May 10am—2pm

As part of the Communities in Landscapes project you are invited to a CSIRO field day to see a new approach to restoring native woodlands and pastures, which aims to increase soil carbon and the capacity of plants to cope with drier climate. Find out the latest information about restoring soil properties, such as using biochar, mulch and native grasses that can increase soil carbon, soil biological activity and soil water retention. Presentations will also highlight new research and the latest findings on ways to manage for biodiversity and agricultural benefits.

If you are interested in attending please RSVP to  
Melissa Piper on 02 6246 4361 or
