

Dung Beetles and Biological Weed Control Day

Are you looking for a machine that:

- Aerates the soil
- Buries dung pads
- Deepens the topsoil
- Digs through compacted soil
- Helps store soil carbon
- Buries dung nutrients in the plant root zone
- Reduces flies and parasite breeding colonies

Look no further.....the answer is Dung Beetles!!

Presenter John Feehan is a recognised authority on Dung Beetles both in Australia and internationally. He was a member of the CSIRO team tasked with introducing bovine Dung Beetles into Australia and now works privately researching, collecting and releasing suitable Dung Beetle species into grazing regions across Australia and internationally.

Are you struggling with the control of St John's Wort, Paterson's Curse, Horehound or Blackberries?

Would just like to reduce your chemical use?

Have you ever considered the use of biological weed control agents?

Presenter Barry Sampson has over thirty years of experience with the biological control of weeds. His business, Weedbiocontrol, provides biological control agents for locally invasive weeds such as Paterson's curse, Bridal Creeper, Horehound, St John's wort, Blackberry, Thistles, Dock, Blue Heliotrope and aquatic weeds.

Thursday 29th May 2014

9 – 3.30 pm

Naradhan Hall

Cost - FREE

The day will include presentations from both John and Barry and a field visit in the afternoon to release some biological control agents. All welcome!
